Market Intelligence Research Brief

Student Name: Ezekiel Kimani

Date: 25/09/2026

Topic/Company: US Consumer Passenger EV Market

---

1. Research Objective

Briefly describe the business question or decision this market intelligence is intended to support.

Objective:
To support leadership decision-making on strategic positioning, investment timing, and competitive response in the US consumer passenger EV market by analyzing the 2025 market benchmark and relevant external signals toward 2030.

---

2. Scope of Research

Define what was included and excluded in this research.

- **Markets or industries covered:** US consumer passenger battery electric vehicle (BEV) market, including sedans, SUVs, hatchbacks, liftbacks, and pickups.

- **Competitor types included:** Legacy manufacturers and pure-play EV manufacturers competing in the consumer passenger EV market.

  Timeframe considered: 2025 benchmark and 2030 strategic outlook, with relevant 2026 market, pricing, charging, and policy developments included.

- **Key constraints (e.g., limited research hours):** The internal dataset is a European-priced EV specification dataset rather than US sales data, and it

does not capture quarterly market volatility or 2026 market developments. GM and Rivian are not represented in the internal dataset. Charging infrastructure, policy developments, demographics, and 2030 forecasts are also outside the internal dataset and rely on external research.

---

3. Research Approach

Summarize how AI-assisted research was conducted.

- **Types of questions asked:** Questions examining the competitive landscape and manufacturer market share, EV pricing and affordability, market trends and signals, charging infrastructure, policy developments, battery cost and manufacturing parity, and 2030 EV market forecasts.

- **How research effort was prioritized:** Research focused first on competitive market share and pricing, followed by charging infrastructure and policy developments, and then 2030 market forecasts and their differing assumptions.

Tools used within Amazon Quick Suite:
- **Space** — the working environment where the dataset and project artifacts were organized/saved.
- **Quick Research** — used to obtain external market intelligence.
- **Market Intelligence Agent** — used to analyze/synthesize the internal dataset and external research.
- **Internal EV dataset** — the uploaded ElectricCarData_Clean.csv used as the internal data source.
- The resulting **Market Analysis and Market Intelligence Brief** are outputs of that workflow.

---

4. Key Market Insights

List 3–5 synthesized insights relevant to leadership decision-making.

Insight 1

- **Insight Summary:** Tesla’s technical leadership persists, but its market

share is declining, suggesting a shift toward a more multi-polar competitive market.

- Supporting Evidence or Signals: The internal dataset shows Tesla with an average range of **501 km**, compared with the dataset average of **340 km**. External research shows Tesla sold approximately **589,160 units in 2025**, down **7%**, with market share declining from **48.7% to 46.0% (-2.7 percentage points)**, while GM gained **4.4 percentage points** and VW Group gained **1.9 percentage points**.
- Why This Insight Matters: Technical leadership does not guarantee continued market dominance.

Insight 2

- Insight Summary: There is a significant affordable EV gap, particularly between lower-priced models and the range available at those price points.
- Supporting Evidence or Signals: The internal dataset contains **27 models under €35,000**, with an average range of **218 km** and average efficiency of **168 Wh/km**. The median dataset price is **€45,000**. External research shows average new EV transaction price was **$54,813 in August 2026**, with EVs carrying a **9.4% premium** over the overall new-vehicle market. The Nissan Leaf was approximately **$29,990** and the Chevrolet Equinox EV approximately **$33,000**. The report also notes that the dataset may underrepresent the newest models.
- Why This Insight Matters: The affordable segment presents an opportunity for EVs that combine lower prices with competitive range.

Insight 3

- Insight Summary: SUVs are the dominant form factor in the internal EV dataset.
- Supporting Evidence or Signals: The internal dataset contains **43 SUVs out of 98 models**, with an average price of **€54,479** and average range of **348 km**. The external research also references models such as the **Ford Mustang Mach-E and Chevrolet Equinox EV**.

Why This Insight Matters: **The findings support the importance of the SUV/crossover form factor in the consumer EV market.**

Insight 4

- **Insight Summary:**There is significant divergence in forecasts for the 2030 EV market.
- **Supporting Evidence or Signals:** External research identifies forecasts ranging from **17% from BloombergNEF to 32–38% from the Harvard Salata Institute.** The internal dataset cannot address temporal forecasts. Battery costs and charging infrastructure are identified as important factors affecting the outlook.

Why This Insight Matters: The wide range of forecasts makes scenario-based planning important rather than relying on a single projection.

Insight 5

- **Insight Summary:**Charging infrastructure remains a binding constraint on mass EV adoption.
- **Supporting Evidence or Signals:** The internal dataset shows **93 of 98 models (94.9%)** have rapid-charging capability and more than **95%** use Type 2/CCS. External research estimates approximately **250,000 public charging ports** compared with approximately **1.2 million needed by 2030.** The report also identifies geographic disparities, with approximately **38,660 stations in California compared with about 529 in Mississippi**, and notes **96 NEVI stations** at the end of 2025.
- **Why This Insight Matters:** Charging infrastructure is a key constraint on the ability of the market to achieve mass EV adoption.

5. Visual Evidence (Optional but Recommended)

Reference any charts, dashboards, or visualizations used to support the insights.

- Chart Type: Bar chart — **US Passenger BEV Market Share by Manufacturer: 2024 vs 2025**
- What the visualization shows: Compares 2024 and 2025 market share for seven leading manufacturers. GM increased its share by **4.4 percentage points**, Tesla declined by **2.7 percentage points**, and VW Group gained **1.9 percentage points**.
- How it supports the insight: It supports **Insight 1** by showing the shift in competitive market share and the movement away from Tesla's previous market position toward a more multi-polar competitive landscape.

Chart Type: Line graph. **EV vs. Overall New Vehicle Average Transaction Price: 2024 – 2026**

- What the visualization shows: Tracks EV and overall new vehicle average transaction prices from December 2024 through August 2026, including the September 2025 spike and the subsequent decline to **$54,813**, with an EV price premium of **9.4%**.
- How it supports the insight: It supports **Insight 2** by showing the movement in EV transaction prices and the continuing price premium relative to the overall new-vehicle market.

---

6. Confidence Assessment

Evaluate the reliability of the insights using the criteria below.

- Source quality: The research combines the internal EV dataset with external sources covering market share, pricing, battery costs, charging infrastructure, policy, and 2030 market forecasts. The Research Report identifies multiple external sources and notes that the internal dataset

has limitations.

- **Consistency across sources:** The reports show alignment on broad market direction and manufacturer rankings, but also identify discrepancies and evidence gaps. The internal dataset may not capture 2025 quarterly volatility, GM's repositioning, or the H1 2026 market break. Charging, NEVI, legal and policy developments, demographics, and forecasts are identified as evidence gaps.
- **Timeliness of information:** The analysis uses a **2025 benchmark** and incorporates relevant **2026 developments**, including pricing, charging, policy, and H1 2026 market changes. The Research Report notes that the internal dataset may not capture the latest developments.
- **Overall confidence level:** Medium

---

7. Limitations and Risks

Document known gaps, assumptions, or areas of uncertainty.

- **Missing data:** The internal dataset is a European-priced EV specification dataset rather than US sales data. It does not contain charging infrastructure, policy developments, demographics, or 2030 forecasts. GM and Rivian are also absent from the internal dataset.
- **Conflicting signals:** The 2030 EV market forecasts vary substantially, from **17% in the BloombergNEF forecast to 32–38% in the Harvard Salata Institute forecast.** The reports also identify differences between the internal dataset and current market developments, including the 2025 quarterly volatility, GM's 48% increase, and the H1 2026 market break.
- **Potential bias or ambiguity:** The internal dataset may not represent the latest US market because it is a European-priced specification dataset and has no temporal dimension. The Research Report also identifies uncertainty around policy developments, including legal challenges to California's ACC II requirements, and uncertainty in forward-looking market forecasts.

---

8. Strategic Implications

Explain how leadership should interpret and use this intelligence.

- **What decisions could this inform?** * Strategic positioning and investment timing in the US consumer passenger EV market.

  Competitive response, including positioning around affordable long-range EVs and SUV/crossover platform.

  What should *not* be concluded from this research? * Do not conclude that Tesla's market-share decline means Tesla is in overall decline; the Agent Report states that Tesla maintains technical leadership while its market share has declined.

Do not conclude that the repeal of the federal EV tax credit will permanently suppress EV adoption; the Research Report identifies other factors affecting the market, including battery costs, charging infrastructure, state mandates, and model availability.

---

9. Summary for Leadership

Provide a concise executive summary (5 - 7 sentences).

Executive Summary:

> The US consumer passenger EV market recorded ~1.2 million BEV sales in 2025 at 7.8% market share, but the repeal of the $7,500 federal tax credit triggered extreme volatility — a 12% BEV share peak in September 2025 followed by collapse to 5.8% in Q4 and a 24% sales decline in H1 2026. The competitive landscape is shifting from Tesla's near-monopoly toward a multi-polar market: GM surged to 13.2% share (+4.4pp) while Tesla declined to 46.0% (-2.7pp), and VW Group also gained meaningfully. Our internal dataset analysis confirms Tesla's continued technical leadership (501 km avg range, fastest charging) and the industry's overwhelming pivot to SUV/crossover platforms (43.9% of models), but reveals critical gaps — notably the absence of GM and Rivian, the two fastest-moving US competitors. The most strategically significant finding is the unprecedented divergence in 2030 forecasts (17% to 38% market share), which makes scenario-based planning essential rather than reliance on any single projection. Structural economics are improving independently of policy — battery costs hit $108/kWh and manufacturing parity is

projected for 2027 — but charging infrastructure (250K ports vs. 1.2M needed) remains the binding constraint on mass adoption. **Overall confidence: Medium**, reflecting strong evidence on current competitive dynamics but high uncertainty on forward projections and known gaps in the internal dataset.
